# Project cover/cabinet for OrangePi again

A dead PSU from a pc stripped to the metal.

1

Needed something to screw to PI onto.
Found some plastic on its way to recycling.
(I ended up flipping the red side up)

2

Clipped the fan (used the base to keep the grid in place)
Sawed a hole to lan and usb.
Clipped hole to the rest of the inputs/outputs.
There is room for a charger and 2 more boards in this psu.
